Economic Brief

Alabama's seasonally adjusted labor force participation rate, at 57.9 percent in July, was lower than the revised June 2025 estimate of 58.0 percent and higher than 57.5 percent recorded in July 2024. The civilian labor force was 2,383,940 in July, compared to 2,386,087 in June 2025 and 2,348,866 a year ago.

¹ Place of residence basis. ² Place of work basis. ^PPreliminary. 'Revised.

Estimates prepared by the Alabama Department of Workforce in cooperation with the Bureau of Labor Statistics, based on a 2024 benchmark.

The similar national labor force participation rate for July, at 62.2 percent, was lower than the 62.3 percent reported the prior month and lower than 62.7 from a year ago.

The State's seasonally adjusted unemployment rate, at 3.0 percent in July, was lower than 3.2 percent from the prior month and unchanged from 3.0 percent reported a year ago. July's rate represented 72,506 unemployed persons, compared to 75,640 in June 2025 and 71,308 in July 2024.

The comparable national unemployment rate for July, at 4.2 percent, was higher than 4.1 percent from the prior month and unchanged compared to the year ago rate of 4.2 percent.

Alabama's not seasonally adjusted wage and salary employment, totaling 2,211,200 in July, declined by 8,300 jobs over the month. Losses were in government (-9,400), manufacturing (-600), construction (-400), information (-300), and other services (-300). Employment gains occurred in private education and health services (+1,500), professional and business services (+500), leisure and hospitality (+300), financial activities (+200), and mining and logging (+200). Employment was unchanged in trade, transportation, and utilities.

Over the past twelve months, total nonagricultural wage and salary employment increased by 28,700 jobs. Annual gains were in private education and health services (+10,100); government (+5,100); leisure and hospitality (+4,600); manufacturing (+4,400); trade, transportation, and utilities (+2,400); other services (+1,700); construction (+1,400); and professional and business services (+800). Annual losses were in financial activities (-1,600) and mining and logging (-200). Employment in information remained unchanged.

LMI Definitions

American Community Survey (ACS): The ACS is an ongoing survey that provides data every year by giving communities the current information they need to plan investments and services. Information from the survey generates data that help determine how more than \$400 billion in federal and state funds are distributed each year.

<u>Bureau of Labor Statistics (BLS):</u> The Bureau is a division of the U.S. Department of Labor and functions as the principal data gathering agency of the federal government in the field of labor economics. The BLS collects, processes, analyzes and disseminates data relating to employment, unemployment, the labor force, productivity, prices, family expenditures, wages, industrial relations, and occupational safety and health.

<u>Census Tract:</u> A small relatively permanent statistical subdivision of a county delineated by local committees of census data users for the purpose of collecting and presenting census data. It is worth noting that census tract conform to county lines (that is they are always subsets of a county), but may not follow zip code lines.

<u>Civilian Labor Force:</u> The civilian labor force comprises the total of all civilians age 16 and older classified as employed or unemployed, or seeking employment. This gives employers a measure of the labor pool.

Consumer Price Index (CPI): A measure of the average change in prices over time for a set group of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) for all urban consumers (CPI-U) which covers approximately 80 percent of the total population and (2) for all urban wage earners and clerical workers (CPI-W) which covers 32 percent of the total population. Among the CPI components are the costs of housing, food, transportation, and energy. While the CPI is not technically a cost of living index, it is often used to indicate changes in the cost-of-living.

<u>Current Employment Statistics (CES) Survey:</u> A monthly survey of nonfarm business establishments used to collect nonfarm payroll employment, and worker hours and earnings by industry and area. Through the Federal/State cooperative effort, these data are used to compute current monthly employment, and hours and earnings estimates, by industry, for the nation, the 50 states and the District of Columbia, and over 250 Metropolitan Statistical Areas (MSA's).

<u>Current Population Survey (CPS):</u> A monthly household survey of the civilian non-institutional population of the United States. This BLS survey provides labor market statistics (e.g., employment, unemployment and wages) by industry, occupation, and demographic characteristics. The Bureau of the Census collects data for this survey in cooperation with BLS.

<u>CES Employment:</u> A count of all persons who worked full or part time or received pay from a nonagricultural employer for any part of the pay period that included the 12th day of the month. Because this count comes from a survey of employers, persons who work for two different companies could be counted twice. Therefore, non-farm payroll employment is really a count of the number of jobs rather than the number of persons employed. This count is also based on where the jobs are located, regardless of where the workers reside. Non-farm payroll employment data are collected and compiled by Current Employment Statistics (CES) Survey.

<u>Labor Force Participation Rate:</u> The labor force participation rate represents the number of people in the labor force as a percentage of the civilian noninstitutional population. In other words, the participation rate is the percentage of the population that is either working or actively looking for work. The labor force participation rate is calculated as: (Labor Force ÷ Civilian Noninstitutional Population) x 100.

<u>Labor Market Information (LMI):</u> A body of knowledge that includes a variety of economic, social, and demographic information. This information describes current conditions and forecasts employment conditions at a future date. LMI is comprised of population data, labor force data, industry data, occupational data, general economic trends, and career data.

<u>Local Area Unemployment Statistics (LAUS):</u> A federal-state cooperative program, which produces monthly estimates of total employment and unemployment for approximately 7,500 areas.

Metropolitan Area (MA): A Core Based Statistical Area associated with at least one urbanized area that has a population of at least 50,000. The Metropolitan Statistical Area comprises the central county or counties containing the core, plus adjacent outlying counties having a high degree of social and economic integration with the central county as measured through commuting.

North American Industrial Classification System (NAICS): A system of identifying industry activity, NAICS is replacing the U.S. Standard Industrial Classification (SIC)system. NAICS will reshape the way we track our industries. NAICS was developed jointly by the U.S., Canada, and Mexico to provide new comparability in statistics about business activity across North America.

Occupational Employment Statistics (OES): A federal state cooperative program, which collects detailed occupational data by industry in a three-year cycle. The OES survey is an annual mail survey measuring occupational employment and occupational wage rates for wage and salary workers in nonfarm establishments, by industry. On a national level, the survey samples approximately 400,000 establishments per year, taking 3 years to fully collect the sample of 1.2 million establishments.

<u>Seasonal Adjustment:</u> A statistical technique that eliminates the influences of weather, holidays, the opening and closing of schools, and other recurring seasonal events from economic time series. This permits easier observation and analysis of cyclical, trend, and other nonseasonal movements in the data.

Standard Occupational Classification (SOC): This is an occupational coding system that was presented by the Bureau of Labor Statistics (BLS) to replace and consolidate several previous coding systems used to classify occupations. The consolidated coding systems include the Occupational Employment Statistics (OES), the Dictionary of Occupational Titles (DOT), and the grouping of occupational titles used by the Census based on survey responses.

<u>Workforce Regions:</u> State specific geographical area, designated by the governor, within which employment and training services are provided under the Workforce Innovation and Opportunity Act (WIOA) in Alabama.
